GreyBoss

New Approved Whole of House Underground Greywater Diversion System

UNIVERSAL
1 YEAR WARRANTY

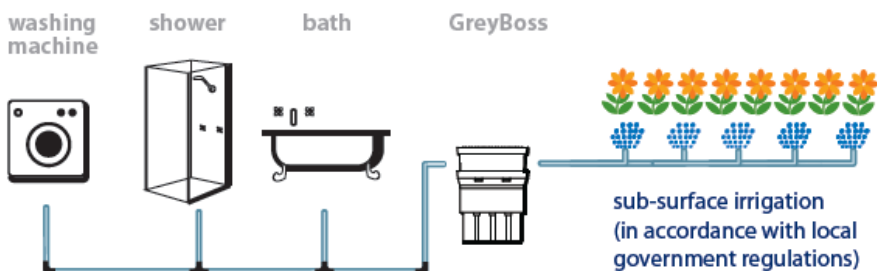

This is a heavy duty grey water system.

Designed with a large grey water inlet and a high capacity pump, the GreyBoss has the ability to collect grey water from the whole house and then distribute it to all points of the garden. The gravity fed unit makes it ideal for houses built on a concrete slab or on stumps.

- Specifically designed for underground installation (gravity fed unit can be installed above ground but must be below plumbing)
- Self cleaning screen filter
- Automatically distributes water
- Watermark approved in Australia
- 100mm inlet allows you to capture grey water from the whole house
- Perfect for slab construction
- High volume pump and tank
- Pump will only run when the tank is full or when activated by the timer - a very efficient system
- Unit can be isolated and grey water can be sent straight to drain
- Pump capacity of 7000 litres per hour and capable of 35 meters of vertical head

How greymate works

1. Grey water is collected from the laundry, shower or bath outlet.
2. The lint & other impurities are intercepted through a coarse s and then flushed back into the sewer system.
3. The filtered water is collected and then automatically pumped via sub-surface irrigation to areas of your garden.
