WATER GUARD your family

keep your family safe from waterborne diseases

Rain Tank Water can contain bird and bat droppings, possum / rodent faeces, insects, leaves and small dead animals. Tank water is a perfect breeding ground for all kinds of nasty bacteria and viruses. Sediments and dirt may clog up your water pipes, your washing machine, pumps, dishwasher and other appliances.

Borehole Water can contain many other unpleasant surprises, such as run-off from fertilizers, chemicals and spray residue, cow and sheep manure.

Town Supply Water usually contains treatment chemicals such as chlorine, and sometimes fluoride (dental), which may have accumulative toxic effects on the human body.

THE WATER GUARD® 3-stage filtration + uv system

Provides Total Protection

- 5 Micron Washable Pleated Sediment Pre-Filter to remove heavy dirt
- Activated Carbon Block Filter to remove chemicals, toxins and odours. It also improves the taste and quality of your drinking water to spring-like freshness.
- 1 Micron Poly Propylene Filter to remove fine sediments, large bacteria and parasites such as Giardia and Cryptosporidium
- Ultra Violet Light Sterilizer (with Audio and Visual Alarms) to naturally sterilize your water of any other bacteria such as E.Coli.
- 2 Liquid Filled Gauges, to show the pressure differential between Inlet and Outlet water, act as Filter Change Indicators
- 2 Shut-Off Valves for Inlet and Outlet
- Fully Assembled on a water resistant laminated wall plate with Filters (and Filter Wrench)
- 5 Year limited Warranty on all parts, (excl. consumable items - Filters and UV lamp)

"Made in NZ", and pre-assembled in an attractive aluminum case with a clear plastic window for simple installation (case dimensions 1000mm x 500mm x 250mm)

Choose between 3 Systems:

No. 1 Water Guard System: 3-Stage Filtration without UV Sterilizer

No. 2 Water Guard System: 3-Stage Filtration with 50 L / Min. UV

No. 3 Water Guard System: 3-Stage Filtration with 100 L / Min. UV
